

BioLPG – the sustainable future of LPG

Calor BioLPG is a sustainable fuel produced from renewable resources. By using BioLPG, organisations can reduce their emissions and carbon footprint without compromising on efficiency.

The benefits

- The carbon emissions from BioLPG are up to 80% lower than standard LPG and can help businesses across the UK reach their sustainability targets.¹
- Every organisation that uses BioLPG is awarded 'Green Gas Credits' as part of the Green Gas Certification Scheme.²
- Businesses don't need to invest to make their operations compatible as BioLPG works seamlessly with existing LPG infrastructure.

The product

BioLPG is chemically identical to LPG, but is made from a blend of waste, residues and sustainably sourced materials. It is just as efficient as LPG and works with all LPG equipment including cylinders, tanks, appliances and vehicles. For peace of mind, BioLPG is produced to the same British Standard accreditation as LPG.

How a BioLPG tariff works

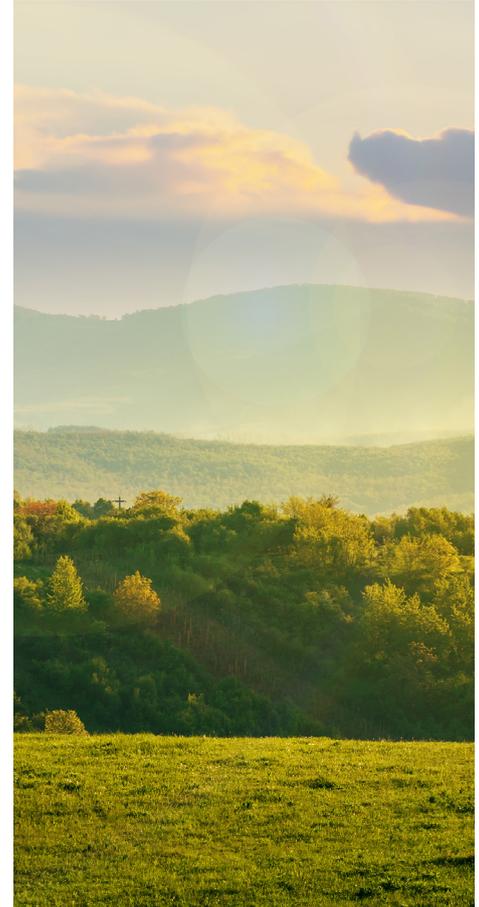

Through a method called mass balancing, we keep a close track on the quantities of LPG and renewable BioLPG mixed into our main supply. By opting for a BioLPG tariff, you're buying into this sustainable mix and a greener future. The entire LPG supply industry has committed to supplying 100% renewable energy by 2040. We're proud to be leading the way towards meeting this ambitious target. Over the coming years the mass of the renewable energy injected into our supply will only increase as we move towards this goal.

The Calor difference

Trusted by homes and businesses for 85 years, Calor is one of Britain's best-loved brands. Better still, we're the country's leading LPG and BioLPG supplier³ with expertise and service that is second to none. Today, we're the UK's highest-rated LPG and BioLPG supplier on Trustpilot.⁴

BioLPG plays a big part in our sustainability goals and those of our parent company, SHV Energy. Through allocation of BioLPG, the gas that we're supplying through our network is now cleaner than ever. As we continue to increase our BioLPG volumes, we're moving ever closer to the industry's 2040 vision.

¹ Atlantic Consulting 2017. ² Information about the Green Gas Certification Scheme can be found on the Green Gas Certification site.

³ The largest supplier by volume based on the UK market share statistics as produced by the government department BEIS. ⁴ Trustpilot rating valid as of 07.09.2020.
